

Are you feeling lucky ?

Phreakers never sleep and they're always on the hunt for unsecured phone systems to make expensive and illegal calls — and you will end up paying big-time. What's more, if your phone system is unsecured, it leaves a gaping hole in your PC and data network security exposing you to a significant threat. **Control Phreak** closes the back door for you, plugging the gap in your network security while simultaneously keeping your phone system completely secure — automatically — all day, every day.
